

Bookham Wether Trial 2010

The following information summarises the third and final shearing of the trial run at Tony Armour's at "Glenrock" Bookham.

This year the wethers were shorn on the 8th of June with just under 12 months fleece. Remember the 09 fleece was only 11 months.

The body weights recorded were taken off-shears and empty. The wethers were off feed for 48 hours at the time of weighing so 10 % could be added to the weights to get a paddock weight.

The support of the sponsors is acknowledged:

- ***Landmark Copeland Medway, Yass – Major Sponsor also wool valuing***
- ***Allflex – for the electronic tags***
- ***Pfizer – Glanvac vaccine***
- ***Jurox – Q-Drench***
- ***All entrants for your sheep***
- ***The Shannon family of "Talmo" for the use of their shed and yards for shearing***
- ***NSW DPI***

The wool prices used are below with the variation from 2009.

16 µm	1477 c	down 10%
17 µm	1234 c	down 11%
18 µm	1148 c	down 6%
19 µm	1052 c	up 3.5%
20 µm	925 c	up 13%
21 um	903 c	up 16%

This year the staple strength for each bin line was used to value the wool. This information is on the bin line summary on each team report. The prices are the average for the 09/10 selling season up until the end of May.

The mutton price used was an average for the same period (18 to 20 kg \$3.05, 20 to 24 kg \$3.25, 24 kg+ \$3.35). The dressing percentage varied depending on fat score, FS 2 was 44%, FS 3 and 4 was 46%. These percentages, which are higher than average, were used because the body weights were 48 hours off feed.

The information is in the following order:

- Team details
- 2010 averages

- A trial summary for each year for all teams. The 2 rankings on this table are explained at the end of the sheet.
- Body wrinkle score – done off shears in 2010.
- Fleece rot score – done at mid sampling in 2010.

In the yearly average sheet an (s) has been placed against the studs. The performance of a wether team off a stud should be higher than their commercial client because they are at least 1 generation ahead.

Teams marked with a # have had there totals divided by 8 instead of the 7 wethers in the team. The rule was, once the number of wethers dropped below 8, yearly totals were to be divided by 8. The individual team sheets give the average based on the number in the team at shearing.

The wool production details listed here are relevant to ewe flocks. If we run ewes from the same properties as dries, the ranking would be the same. Reproductive performance is most strongly controlled by ewe condition at critical times. Genetics has a role, but is minor except for a few bloodlines. So for the majority of teams the rankings for a ewe competition (wool and reproduction) would be broadly similar.

The profit of a merino operation producing first cross lambs is still strongly influenced by the wool production of the ewe.

The latest combined bloodline analysis for the period 1999 to 2010 has just been released. The top bloodlines in the combined analysis are also the top bloodlines in this trial. This means that this trial has benchmarked your team against the best available in Australia at present.

Thanks must go to Sam Weir, Malcolm Peake, Richard Hyles for their efforts in getting the trial stated, to Sally Martin for helping with the data collection, to Tony for running the wethers and to all entrants for your willingness' to enter your sheep and help at various stages of the trial.

These trial are important as they show that the wool industry is producing sheep which are profitable. It is the individual's decision how they use this information to improve their business.

Overall Total \$ is the sum of all income from the life of the trial (3 fleece plus carcass). This is strongly influenced by the number of wether alive.

Overall Average \$ is the average per head production for the life of the trial. The 3 fleece and carcass income has been averaged

Teams marked with a # next to the Overall Average rank have had there totals divided by 8 instead of the 7 wethers in the team. The rule was, once the number of wethers dropped below 8, yearly totals were to be divided by 8. The individual team sheets give the average based on the number in the team at shearing.

The body weight in 2008 is a pre shearing weight with fleece. The 09 and 10 weights are off the board, so include fasting.

Body Wrinkle: The degree of body wrinkle from 1 (no wrinkle) to 5 (extensive wrinkle)

Traits are reported as deviations (Dev) from the average trait score for all trial wethers. The percentage of each team for each score is also reported.

For the majority of breeders objectives a negative deviation would be considered favourable and the larger the deviation the better.

Team No.	2010 Body Wrinkle						Average Body Wrinkle
	Dev	1	2	3	4	5

Fleece Rot Score

Score 1 is given to a sheep with no signs of FR, score 5 has crusting more than 10mm thick. A fly struck sheep is given a score 5, which applied to all 5's in the table below.

2010		Counts				
Team#	Average	1	2	3	4	5
